

Context Hook

→ It mainly use for passing the value and solve the Problem born from props.

→ Think there is website which contain number of component and we have pass the value from them as shown below.

→ From the diagram we can understand that we have to pass the value from one inner component to outer component.

→ But during passing value from all component we are unnecessarily passing the data from all other component which not needed.

→ So context hook we solve this problem.

Website ↓ App.jsx
